

# Enhance Situational Awareness with an Eye in the Sky

**P**reventing human trafficking, drug trafficking, and other illegal activities across borders is a key challenge facing border patrol agencies. The vast rough terrain coupled with the extensive coverage area makes it difficult to monitor effectively.

Aerial intelligence is a gamechanger in border safety and security. Real-Time thermal imaging and HD day/night cameras make it easier to identify illegal border traffic before they make their way across.

Aerodrome's aerial surveillance capabilities coupled with data analysis and automated alerts puts your borders under control.

## Real-Time Intelligence, Surveillance, and Reconnaissance (ISR)

Aerodrome's advanced drone and UAV capabilities were developed in the Israel Air Force. It's built on thousands of accumulated flight hours and data analysis working with governments and law enforcement agencies looking for a more efficient way to protect and close borders.

Our variety of leading platforms and payloads dramatically reduce costs, provide access to leading technology, and helps maximize efficiency.

### Easy 3-Stage Process

## Benefits

BVLOS Operations  
Quick deployment through VTOL

Operational  
Flexibility

Sensor  
Diversity

Data Analytics And  
Image Processing

Leading  
Technology

## About Aerodrome

We believe in the value of aerial intelligence for business. Every day, we work together with businesses and drone operators to capture data from the sky, improve drone operations, and ensure drones are properly maintained.

Our services enable our clients to safely collect the data they need from different installations in multiple industries and offer actionable insights to improve workflows, reduce expenses, and maintain complex industrial facilities.
