

Upgrade Site and Pipeline Security with Real-Time Aerial Surveillance

Oil & Gas installations are frequently targeted by thieves, terror groups, and other illegal activities that are looking to disrupt operations. Aerial intelligence protects against threats with close-up views of oil rigs, refineries, pipelines, and other infrastructure elements while ensuring the safety of employees. From capturing and processing meaningful data to generating actionable operational insights, Aerodrome keeps the Oil & Gas industry pumping safely and securely.

A Turnkey Solution

Real time aerial surveillance enables early detection of criminals, unauthorized alterations to critical equipment, or potentially hazardous situations at single sites and assets spread over hundreds of kilometers. Aerodrome's turnkey solution offers a proactive approach to security, protecting against unforeseen dangers while increasing awareness of perimeter safety with automated alerts and real-time monitoring

Easy 3-Stage Process

- 1)  Capture Data
- 2)  Process and Analyze Data
- 3)  Generate actionable insights & automated alerts

Benefits

BVLOS operations -
VTOL platforms

Reduce CapEx with
Data-as-a-Service

Faster Response Time
to Real-time Situations

Improve Efficiency with
Automated Flights and Alerts

Maximize Perimeter
Security Awareness

About Aerodrome

We believe in the value of aerial intelligence for business. Every day, we work together with businesses and drone operators to capture data from the sky, improve drone operations, and ensure drones are properly maintained.

Our services enable our clients to safely collect the data they need from different installations in multiple industries and offer actionable insights to improve workflows, reduce expenses, and maintain complex industrial facilities.
